Valeurs des res. de Pull-Up suivant la frequence souhaitée  
R155, R156, R157, R158.

Valider les valeurs durant tests avec longueur des cables et bruit

Micro :  
 $V_{ILmax} = 0.35 \times V_{dd} = 0.35 \times 3.3 = 1.15V$   
 $V_{IHmin} = 0.7 \times V_{dd} = 0.7 \times 3.3 = 2.31V$   
 $V_{OLmax} (2-5mA) = 0.5V$   
 $V_{OHmin} (2-5mA) = V_{dd} - 0.5 = 3.3 - 0.5 = 2.8V$

Routing notes:

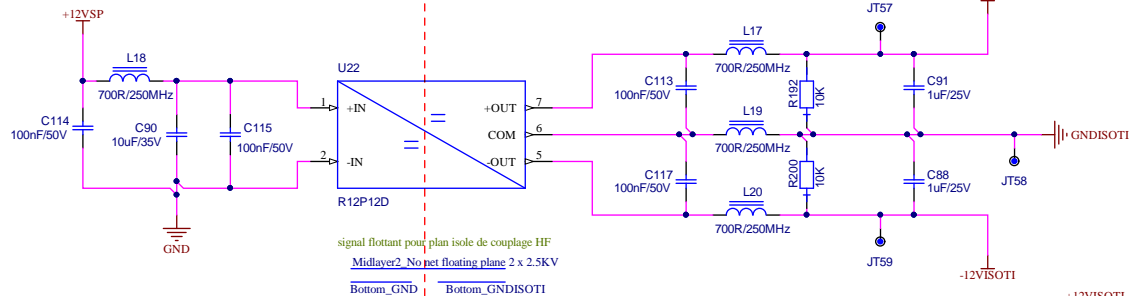

1) careful for EMC is needed

- 1) 230Veff circuit, 5.5mm isolation needed
- 2) Parassitic floating (or not floating) capacitor with layers plane needed

- 3) Parassitic floating (or not floating) capacitor with layers plane needed

signal flottant pour plan isole de couplage HF  
Midlayer2\_No net floating plane 2 x 2.5KV  
Bottom\_GND Bottom\_GNDISOTI

norme Téléinfo : 1 Hz, 0% / 50% / 100%

FOD817 Input current 3mA approx.

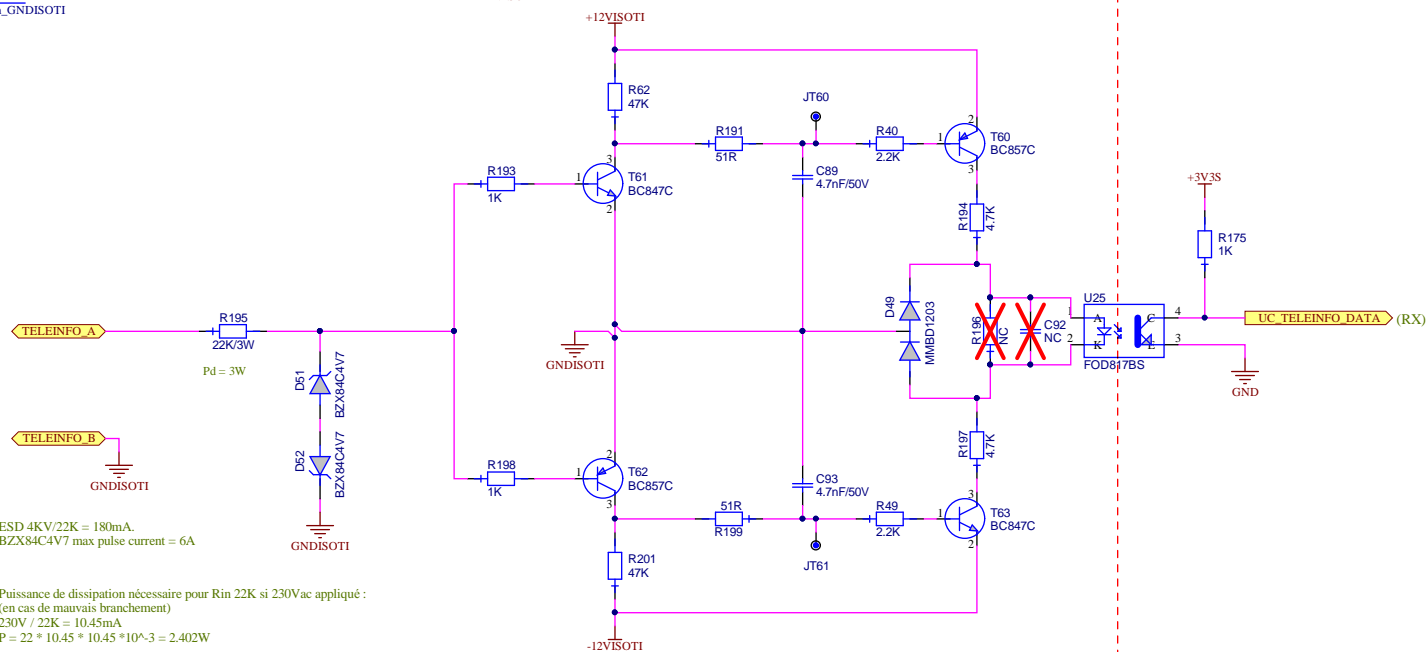

3mA \* 10KOhm 30V >> 3.3V  
Out ON current = (3.3V - 0.7V) / 2.2KOhm = 1.05mA  
Out ON volt approx 0.3-0.4V

Out OFF current = 8pA \* 2.6 = 21 pA + dark current (10-100nA)  
Our OFF Volt sat 3.3V-100nA\*22K = 3.3V - 2.2mV = 3.3V

R196 (NC) = 100K if spike input filter needed  
C92 (NC) = 220n if spike input filter needed

Output is negated because the erdf signal is :  
0 as modulated 0.8-5V 50KHz  
1 as 0V

Remarque :  
les valeurs des calculs ci-dessus sont obsolètes, suite aux modifs appliquées entre proto A et proto B  
Mais laissé volontairement sur schéma pour indiquer la méthode de dimensionnement initial

ESD 4KV/22K = 180mA.  
BZX84C4V7 max pulse current = 6A

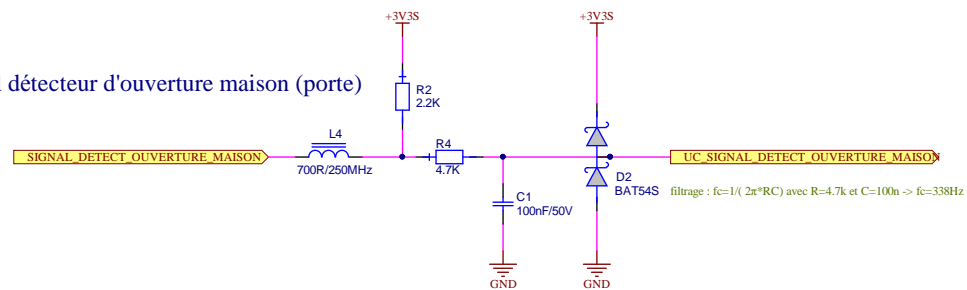

Puissance de dissipation nécessaire pour Rin 22K si 230Vac appliqué :  
(en cas de mauvais branchement)  
230V / 22K = 10.45mA  
P = 22 \* 10.45 \* 10.45 \* 10^-3 = 2.402W

Routing notes:

- 1) isolation requirements
- 2) careful for EMC is needed
- 3) careful for EMC is needed

Signal détecteur d'ouverture maison (porte)

Routing notes:  
High current tracks

[No Variations]	Carte Boîtier Principal		Sheet Size: A3
	Détecteur ouverture porte maison (signal)		Print Date: 10/30/2016
	EDA: Altium Designer 16		Page: 10 / 22
			Rev. D

Remarque : 295mA  
Imax = 140mA est valable pour la SOMME des courants consommés simultanément sur les sorties ALIM\_SIRENE\_INT et ALIM\_SIRENE\_EXT

Pour +15VS = +15V :  
Vout = 14 - (1.35\*0.7) - Vcesat (0.1V) = 13.25V  
soit 13.25V x 0.14A = 1.85 W max en sortie
